PRESS RELEASE

MEDICAL IMAGING OFFERS STATE-OF-THE-ART BREAST MRI's

May 16, 2005 – Medical Imaging, Kansas City's premier provider of radiological care, now offers the very latest weapon in the fight against Breast Cancer, the Breast MRI.

Medical Imaging is the only free-standing (i.e., non-hospital) radiology provider in Kansas City to offer this state-of-the-art exam.

"The Breast MRI offers patients and doctors a chance to get the most precise image possible," says Medical Imaging's Chief Operating Officer Michael Gordon. "The better the image, the better the accuracy of the diagnosis."

Breast MRI's do not require the patient to undergo the usual discomfort mammograms require. This examination is also used to detect ruptures in breast implants.

Individual insurance plans may or may not provide coverage for this exam; patients should check with their health care provider.

Details about the Breast MRI can be found at the company's website, at www.medicalimagingkc.com.

Medical Imaging is the area's premier provider of radiological care, with a full-service free-standing radiology facility in North Kansas City; a Open MRI facility in Shawnee, and a full-service facility in Independence. Their full-service facilities provide the complete range of state-of-the-art radiological procedures, including High Field and Open MRI, CT Scans, Nuclear Medicine, Ultrasound, General X-Ray, Mammography, Osteoporosis Screening, and CT Lung Cancer Screening.

Medical Imaging pioneered the concept of free-standing radiology facilities and has been serving the Greater Kansas City community for over thirty years.
